

For Immediate Release:

IT'S THE NEW "GREENING OF AMERICA!"

NEW BOOK "HOW TO STOP SUBURBIA FROM KILLING AMERICA" IS A MAJOR HOME RUN FOR THE LARGEST DEMOGRAPHIC IN AMERICA: THOSE WHO WANT TO SAVE OUR COUNTRY!

Thomas Fenaughty, in his first book, "How To Stop Suburbia From Killing America" (available online from lulu.com), has hit a major home run on behalf of the largest Silent Majority in America: Americans who want to preserve the natural beauty and physical wonder of this country.

Now that the two-party political system winds down into fourth-grade spitting and name-calling along the pinprick-narrow arteries of non-thinkers and non-educators such as Mike Moore and Anne Coulter, America is lucky to receive a book by a concerned citizen/educator that hearkens back to the time when there was thought expressed within our democracy, rather than kindergarten one-liners.

"How To Stop Suburbia From Killing America" brings us a fresh new vision that is comparable to Charles Reich's "The Greening Of America," and the work of futurist architect Buckminster Fuller, who popularized the concept of the energy-efficient geodesic dome!

Author Tom Fenaughty has degrees in biology and psychology, and is currently working in service to the community as a nurse. In his primer, he has managed to present a cautionary tale about what we are doing wrong, and more importantly a solution based on something even the U.S. Military finds totally feasible.

Tom's concept for restoring both health and commerce to our beleaguered and decaying city centers is to build efficient buildings that are based on the same concepts as U.S. Aircraft Carriers. An aircraft carrier, after all, is a floating, self-sustaining city of 3000! The same, with little effort, can be reproduced within the middle of our disastrously ill-planned downtown urban areas.

To hear every facet of how this process works, book an interview with this verbally-skilled teacher! Learn how the Eco-Architecture of the future is here now, and is necessary to start implementing. To start to build "City Ships" now, and save energy and resources and human life, is as important as the Seat Belt once was! The time is now.
